ORG CHART · TODAY AND TWELVE MONTHS OUT

Helm

2 in seat · 5 target hires · 1 co-founder gap

Co-founder & CEO

IN SEAT

8 years scaling DTC operations, ex-Shopify Plus.

Owns fundraising, partnerships and the first fifty customer conversations. Carries sales until the founding AE lands.

Co-founder & CTO

IN SEAT

Former ML lead, two prior exits in workflow automation.

Owns the agent architecture and the integration layer — the reason automated actions are safe to run unattended.

ENGINEERING

Integrations Engineer

Q3 HIRE

Shopify, 3PL and support connectors.

First hire out of the raise. The roadmap is integration-bound, not model-bound — every connector widens the addressable market.

Agent Reliability Eng.

Q4 HIRE

Evaluation harness and guardrails.

Owns the tests that decide whether an action is safe to run without a human. Blocks the move from approve-each to approve-by-exception.

OPERATIONS

Head of Customer Ops

GAP

Nobody on the team has run support at volume.

Flagged in the People pillar as co-founder shaped rather than a hire — a senior operator who has carried a support queue through a scale event, at equity level.

Onboarding Specialist

Q4 HIRE

Migrates a brand's workflows in week one.

Churn is decided in the first week. This role exists to make the first automated action happen inside a customer's first session.

GROWTH

Founding AE

Q3 HIRE

Converts the 1,400-brand waitlist.

Reports to the CEO until there is a second seller. Hired against a proven motion, not to invent one.

Content & Lifecycle

Q1 2027

Top of funnel once the motion repeats.

Deliberately late. Paid acquisition before the sales motion is repeatable buys churn, not growth.
